NoteValue

Experience a new level of engagement in dApps with our **tokenized notifications**

BY TEAM IDEA ALCHEMISTS

Our team

IDEA ALCHEMISTS

CHAI JIN XIE

Business Development Manager

- Identify target customers & market, develop business strategies and setting overall direction.
- Success in startup-related competition such as Top 3 in EIC 2022 & UAiTED innovation competition 2023.

LEE JUN YUAN

Lead Protocol Developer

- Solution Ideation and technical knowledge fact check.
- Proficient in Python, R, Java, Lua.
- Active participant in Data Science case competition.

HO TING SHENG

Research Analyst/ Protocol Developer

- Conduct research and analysis on the latest developments in the blockchain industry.
- Proficient in Python, C, Go, Java.
- Actively participated in startup makeathon event.

LEONG YEN HEE

Research Analyst/ Protocol Developer

- Gathered data related to Web3 and blockchain.
- Proficient in Python, C++.
- Having knowledge in robotics software development.
- EIC 2022 Finalist.

LIM CHIA HUI

Marketing Manager

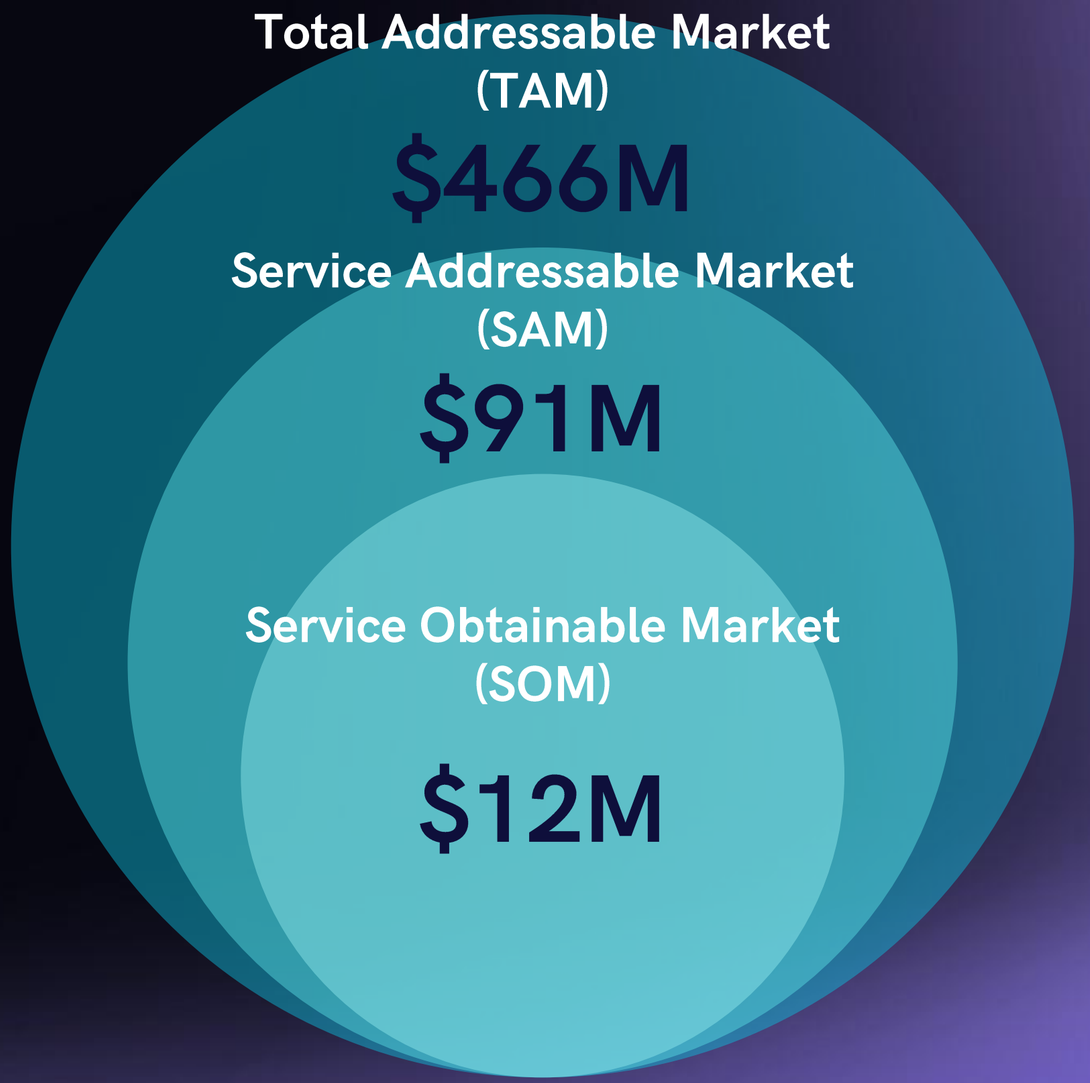

- Conduct market research and market data analysis.
- Active participant in economics related competition.
- Experience in developing strategic marketing plans and identifying target customer segments.

Market Size

14,000+ dApps (2023)

85,000,000 registered wallet id (2023)

2,700,000 users in dApps (2022)

Customer Profile

dApps Startups

Wants

Improve user experience and user engagement

Needs

Enhance user trust and gain revenue

Problems Statement

01

Low user Attraction

Struggle with **gaining visibility** among potential users.

02

Vulnerabilities in Centralized Apps

Centralized Apps faces **privacy issues** and **lacks user ownership**.

03

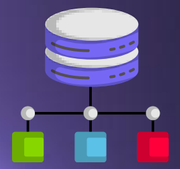

Costly Expenses

High infrastructure and maintenance fees for centralized notifications.

Our Solution

THEORETICAL FRAMEWORK

We help dApps startups
to attract more users and save cost
even without relying on centralized notifications

Technology Involved	Essence of Notification	Roles of Smart Contract
 **NFT / Fungible Token**	NFT: Personal Notification	• Mint Tokens & Create Messsage
 **Smart Contract**	Fungible token: Broadcasting Message	• Keep an eye out for blockchain status
 **Interplanetary File System (IPFS)**		• Sent out to users by schedule

Protocol Flowchart

Mint - Token carrying message is minted on the blockchain

Store - NFT will be produced then stored linked file at IPFS, Fungible token will omit this step

Batch - All related tokens will be batch-sent together to save gas fees

Receive - Subscribed users will be notified and receive the tokenized notification

Open - Users can look at the tokenized notification or the file linked to NFT

Generate - Smart contract generate notification

Low user Attraction

Vulnerabilities in Centralized Apps

Costly Expenses

Our Values

01

Highly Engaging Notification

- Tokenized notifications suit the needs of users.
- Incentivize and reward users with tokens, encouraging them to use dApps.

Low user Attraction

Vulnerabilities in Centralized Apps

Costly Expenses

Our Values

01

Highly Engaging Notification

- Tokenized notifications suit the needs of users.
- Incentivize and reward users with tokens, encouraging them to use dApps.

02

Private & Secure Conveyance

- Avoid single point of failure.
- Secure metadata with asymmetric encryption.
- Enhance app reliability and reputation.

Low user Attraction

Vulnerabilities in Centralized Apps

Our Values

01

Highly Engaging Notification

- Tokenized notifications suit the needs of users.
- Incentivize and reward users with tokens, encouraging them to use dApps.

02

Private & Secure Conveyance

- Avoid single point of failure.
- Secure metadata with asymmetric encryption.
- Enhance app reliability and reputation.

03

Cost-Effective Development

- Reduce expenses for centralized storage servers.
- Utilize P2P networks.
- Developers benefit from flexible smart contracts.

Low user Attraction

Vulnerabilities in Centralized Apps

Competitor Analysis

	NoteValue	EPNS	status	blocknative
Overview	Tokenized Notification	PUSH Nodes	Whisper protocol	Webhooks
Privacy & Security	✓	✓	✓	✓
Scalable Platform	✓	✓	✗	✗
Compatibility	✓	✗	✗	✗
Timely Transmission	✓	✗	✗	✓

Our solution focus on price stability, high scalability and compatibility with various wallet and dApps

Vision

"To provide the most engaging and secure notification for every user in the world"

Project Timeline

Research & Design

Jun-Dec 2023

- Conduct market research
- Design protocol

Pilot Test

Jan-Mar 2024

- Identify target group
- Gather data & feedbacks

Develop Partnership

Apr-Jun 2024

- Explore collaboration opportunities & mutual benefits

Launch Service

Jun-Jul 2024

- Execute marketing campaigns

Build Community

Jul-Dec 2024

- Community engagement strategy
- Customer loyalty

Multi-chain Expansion

Jan-Dec 2025

- Broadening the potential user base

New Features

Jan-Dec 2025

- Based on user needs and market demands

Revenue Streams & Milestones

Usage Fees

- Charge a fee for each push notification sent
- 0.0002 USD per notification

Consultancy & Integration

- Consulting services for businesses to integrate our solution with their dApps
- 20,000 USD per project

Partnership with 5 startups to gain **100,000 Users** within the First Year

$50,000 in the first half of the year

Expected Impact

New Market Leader with breakthrough tech

30% cheaper compared to alternatives

Save 1,000+ accounts from being hacked

Testimonials

"Tokenizing the push notifications is a very interesting concept. It actually sounds very appealing to me, like, ‘Uh, I get a push notification, and that notification itself will turn into an NFT, and just the fact I’ve said yes to receiving a notification means some are automatically going to get an NFT.'”

Monique Tyrer
Startup Founder at School of Block (Blockchain)

“Yeah, that's interesting because those notifications aren't just communications. I'd like to say we're doing this, or this event is happening, or this giveaway is happening, like there’s something more valuable in terms of what you're offering. So I think that's super interesting .”

Ben Wyeth
Founder of Al Goanna, Shufl.app and The Goanna Tree Fund
